Quantitative Research in Education
Intermediate & Advanced Methods

DIMITER M. DIMITROV
George Mason University
This book offers a comprehensive presentation of quantitative research design and statistical methods in the context of education and related fields. The text is intended primarily for use by students who take intermediate and advanced quantitative research courses as a part of their graduate degree program, but it can be a useful resource for researchers in education, counseling, rehabilitation, psychology, sociology, social work, and human development as well.

The main purpose of this book is to provide the readers with an in-depth conceptual and methodological understanding of intermediate and advanced quantitative research methods, as well as the skills necessary to apply such methods using SPSS and to interpret the results. This is achieved by building layers of context-based understanding of research concepts and methods, their statistical translation, methodological principles, computer-based data analysis, presentation of the results in APA style format, and contextual interpretations. The text allows people who experience difficulties with analytic representations of statistical concepts to capitalize on conceptual understanding and still be able to master the research tools necessary for their work on theses, dissertations, and professional research.

While there are many excellent introductory books on research design and statistics in education and the social sciences, most books at the intermediate and advanced levels tend to be either too technical and mathematical or too simplistic. Typically, claiming to have an "applied orientation," such books are dominated by presentations of SPSS dialog boxes and printouts at the expense of theoretical and methodological rigor. To bridge the gap between these extremes, this book attempts to provide a balance between conceptual meaning and its statistical translation by developing understanding and application skills in a spiral exposure to quantitative concepts and methods. For example, the comparison of groups on variables of interest is addressed in a sequence from univariate cases of t-tests, nonparametric methods, and analysis of variance (ANOVA) to scenarios illustrating the use of multivariate analysis of variance (MANOVA) and structural equation modeling (SEM). As another example, the concept of validity is addressed in the framework of measurement, research design, and structural equation modeling. Particular attention is devoted to potential problems associated with violation of assumptions, common misconceptions (e.g., conducting MANOVA versus separate ANOVAs), effect sizes, confidence intervals, and sample size. The book is organized in four parts comprising 24 chapters. Each chapter ends with a summary and study questions.

**Part I [Measurement in Educational Research]** consists of three chapters. Chapter 1 presents variables and measurement scales in the context of education. The focus is on the nature of measurement in education, types of variables, types of scales and their transformations, permissible arithmetic operations with scale values, summation symbols, and basic rules of summation. Chapter 2 introduces the classical model of reliability of scores, types of reliability, and reliability of composite scores. Chapter 3 deals with the concept of validity for measurement instruments (e.g., tests, questionnaires, or inventories) and types of validity (content-related validity, criterion-related validity, and construct-related validity).

**Part II [Research Design]** consists of two chapters. Chapter 4 deals with research problems, hypotheses, and types of quantitative research: nonexperimental research, experimental research, and threats to internal and external validity. Chapter 5 presents pre-experimental and true experimental research designs that involve quantitative methods of data analysis. The focus is primarily on conceptual understanding and methodological principles underlying the application of such designs in educational research.
Part III [Univariate Statistics in Educational Research] consists of fourteen chapters. The first five of these chapters (6, 7, 8, 9, and 10) cover introductory statistics and prepare the ground for understanding and practical applications of intermediate statistics in educational research. The next six chapters (11 through 16) provide intermediate treatment of correlation, regression, and analysis of variance (ANOVA) including some nonparametric methods. The last three chapters in this section (17, 18, and 19) provide more advanced treatment of multiple regression, analysis of variance, and the relations between them.

Part IV [Multivariate Statistics in Educational Research] consists of five chapters. This part covers the topics of logistic regression, multivariate analysis of variance (MANOVA), exploratory factor analysis, confirmatory factor analysis, and elements of structural equation modeling (SEM). The analytic framework of these topics is simplified and tailored to conceptual understanding, computer-aided applications, and interpretations in the context of educational research.

Supplements
Data sets for computer-based applications in examples using SPSS can be downloaded from the online supplement to this book [http://cehd.gmu.edu/book/dimitrov]. This supplement provides also (a) answers to the study questions for each chapter, (b) addendum to some topics discussed in the book, (c) syntax for confirmatory factor analysis, path analysis, and group comparison on latent variables in the framework of major computer programs — LISREL, AMOS, EQS, and Mplus [used for illustrations in Chapters 23 and 24], and (d) additional references (books, articles, and online products) related to the content of this book.

Acknowledgments
I would like to acknowledge the assistance of my graduate research assistant, Jill Lammert, who provided valuable editorial comments and suggestions throughout the writing of this book. I also appreciate the feedback and encouragement of colleagues from different universities as well as graduate students who used draft chapters of this book in quantitative research courses that they took with me in the Graduate School of Education at George Mason University.

Dimiter M. Dimitrov
# Contents

Preface xv

## Part I  Measurement in Education  1

### Chapter 1  
**Variables and Measurement Scales**  3

1.1 Variables in Educational Research  3
1.1.1 Observable versus Latent Variables  4
1.1.2 Continuous versus Discrete Variables  4
1.2 Scales of Measurement  5
1.2.1 What is Measurement?  5
1.2.2 Nominal Scale  6
1.2.3 Ordinal Scale  6
1.2.4 Interval Scale  6
1.2.5 Ratio Scale  7
1.2.6 Scale Transformations and Operations  7
1.2.7 Scaling of Individual Items  9
1.3 Symbols and Rules for Summation of Variables  9
1.3.1 Symbolic Notations  9
1.3.2 Summation Operator  10
1.4 Summary  11
1.5 Study Questions  13

### Chapter 2  
**Reliability**  15

2.1 What is Reliability?  15
2.2 Classical Concept of Reliability  16
2.2.1 True Score  16
2.2.2 Definition of Reliability  16
2.2.3 Standard Error of Measurement  17
2.3 Types of Reliability  18
2.3.1 Internal Consistency Reliability  18
2.3.2 Test-retest Reliability  19
2.3.3 Alternate Forms Reliability  20
2.3.4 Criterion-referenced Reliability  20
2.3.5 Interrater Reliability  22
2.4 Reliability of Composite Scores  23
2.4.1 Reliability of Sum of Scores  23
2.4.2 Reliability of Difference of Scores  24
Chapter 5

**BASIC RESEARCH DESIGNS** 53

5.1 Pre-experimental Designs 53
5.1.1 One Group Posttest-Only Design 53
5.1.2 One Group Pretest-Posttest Design 54
5.1.3 Nonrandomized Control Group Posttest-Only Design 54

5.2 True Experimental Designs 55
5.2.1 Randomized Pretest-Posttest Control Group Design 55
5.2.2 Randomized Solomon Four-Group Design 56
5.2.3 Randomized Control-Group Posttest Only Design 57

5.3 Quasi-Experimental Designs 58
5.3.1 Nonrandomized Pretest-Posttest Control Group Design 58
5.3.2 One Group Time-Series Design 59
5.3.3 Control Group Time-Series Design 60

5.4 Summary 61
5.5 Study Questions 63

PART III UNIVARIATE DATA ANALYSIS 65

Chapter 6

**REVIEW OF INTRODUCTORY STATISTICS** 67

6.1 Organizing and Graphing Data 67
6.1.1 Frequency Table 67
6.1.2 Basic Distribution Graphs 68

6.2 Describing Distributions 72
6.2.1 Percentiles 72
6.2.2 Measures of Central Tendency 74
6.2.2.1 Mode 74
6.2.2.2 Median 74
6.2.2.3 Mean 74
6.2.2.4 Properties of the mode, median, and mean 75

6.2.3 Measures of Variation 75
6.2.3.1 Variance 76
6.2.3.2 Standard deviation 76
6.2.3.3 Pooled variance 77
6.2.3.4 Some basic rules 77

6.2.4 Standard Scores 78
6.2.5 Scale Transformation 79

6.3 Summary 80
6.4 Study Questions 82
Chapter 7

**BASIC DISTRIBUTIONS** 83

7.1 Normal Distribution 83
  7.1.1 What is a Normal Distribution? 83
  7.1.2 Basic Properties of the Normal Distribution 85
  7.1.3 Determining Percentiles and Percentile Ranks 86
  7.1.4 Sampling Distribution of the Mean 87
  7.1.5 Normal Q-Q Plot 89
7.2 Student’s t-Distribution 91
7.3 F-Distribution 92
7.4 Chi-square Distribution 93
7.5 Summary 94
7.6 Study Questions 95

Chapter 8

**HYPOTHESIS TESTING** 97

8.1 What is Hypothesis Testing? 97
8.2 When To Reject (or Not) the Null Hypothesis? 98
8.3 Testing Hypotheses about the Mean 100
  8.3.1 One-sample Case for the Mean 100
  8.3.2 Two-sample Case for the Mean: Independent Samples 106
  8.3.3 Two-sample Case for the Mean: Dependent Samples 111
8.4 Summary 113
8.5 Study Questions 114

Chapter 9

**HYPOTHESIS TESTING FOR PROPORTIONS** 117

9.1 One-Sample Case for Proportion 117
9.2 Testing H0: \( P_1 = P_2 \) for Independent Samples 122
9.3 Testing H0: \( P_1 = P_2 \) for Dependent Samples 127
9.4 Summary 131
9.5 Study Questions 132

Chapter 10

**CORRELATION AND SIMPLE REGRESSION** 135

10.1 Correlation between Two Variables 135
  10.1.1 What is Linear Relationship (Correlation) between Two Variables? 135
  10.1.2 The Pearson Product-Moment Correlation Coefficient 138
10.2 Simple Linear Regression 144
  10.2.1 Correlation, Prediction, and Causation 144
  10.2.2 The Regression Line 144
Chapter 11

PARTIAL AND PART CORRELATION 159

11.1 Partial Correlation 159
11.2 Part Correlation 163
11.3 Summary 165
11.4 Study Questions 166

Chapter 12

NONPARAMETRIC TESTS 167

12.1 The Man-Whitney U Test 167
12.2 The Wilcoxon Signed-Rank Test for Dependent Samples 170
12.3 Chi-Square Goodness-of-fit Test 172
12.4 Chi-Square Test for Association 177
12.5 Summary 182
12.6 Study Questions 183

Chapter 13

MULTIPLE REGRESSION 185

13.1 The Concept of Multiple Regression 185
13.2 Comparison of Full and Restricted Regression Models 191
13.3 Multicollinearity 194
13.4 Cross-validation 197
13.5 Statistical Power, Effect Size, and Sample Size 197
13.6 Outliers and Influential Data Points 199
13.7 Categorical Predictors in Multiple Regression 201
13.8 Interaction between Predictors in Multiple Regression 203
  13.8.1 What is Interaction between Predictors? 203
  13.8.2 Testing for Interaction between Predictors 206
  13.8.3 Centering Predictors 207
13.9 Selection of Predictors in Multiple Regression 209
13.10 APA Style for Multiple Regression Results 210
13.11 Summary 211
13.12 Study Questions 214
Chapter 14

**ONE-FACTOR ANALYSIS OF VARIANCE**

14.1 The Concept of One-Factor Analysis of Variance 218
14.2 Assumptions in ANOVA 219
14.3 Effects in One-factor ANOVA 220
14.4 Within-groups and Between-groups Variance 221
14.5 Linear Model for One-factor ANOVA 223
14.6 Testing the ANOVA Null Hypothesis 223
14.7 Multiple Comparisons 225
    14.7.1 Post Hoc Comparisons 225
    14.7.1.1 The Tukey method of multiple comparisons 225
    14.7.1.2 Bonferroni method of multiple comparisons 226
    14.7.2 Planned Comparisons 227
    14.7.2.1 Contrasts for planned multiple comparisons 227
    14.7.2.2 Dunnett method of multiple comparisons 228
14.8 Determining Effect Size 230
    14.8.1 Effect Size of Mean Differences 230
    14.8.2 Omnibus Effect Size 230
14.9 Determining the Sample Size 234
14.10 Consequences of Violating the ANOVA Assumptions 234
14.11 Interpretation of SPSS Output for One-factor ANOVA 236
14.12 Summary 238
14.13 Study Questions 239

Chapter 15

**TWO- AND THREE-FACTOR ANOVA** 241

15.1 Two-factor ANOVA 241
    15.1.1 Null Hypotheses in Two-factor ANOVA 241
    15.1.2 Assumptions in Two-factor ANOVA 242
    15.1.3 Effects in Two-factor ANOVA 243
    15.1.4 Linear Model for the Data in Two-factor ANOVA 245
    15.1.5 Sum of Squares in Two-factor ANOVA 246
    15.1.6 Mean Squares in Two-factor ANOVA 247
    15.1.7 Testing the Null Hypotheses in Two-factor ANOVA 248
    15.1.8 Omnibus Effect Size in Two-factor ANOVA 249
    15.1.9 Types of Interaction in Two-factor ANOVA 251
    15.1.10 Testing for Simple Main Effects 252
    15.1.11 Using SPSS for Two-factor ANOVA 252
15.2 Three-factor ANOVA 257
15.3 Summary 264
15.4 Study Questions 265
Chapter 16

ANALYSIS OF COVARIANCE 267

16.1 The Logic Behind ANCOVA 267
   16.1.1 Basic Concepts in ANCOVA 267
   16.1.2 Adjusted Group Means in ANCOVA 268
   16.1.3 Increased Test Power with ANCOVA 270
   16.1.4 Assumptions in ANCOVA 271
16.2 Performing ANCOVA and Interpreting the Results 271
16.3 ANCOVA versus ANOVA on Gain Score 277
16.4 Summary 279
16.5 Study Questions 280

Chapter 17

MULTIPLE REGRESSION AND ANOVA 281

17.1 One-Factor ANOVA via Multiple Regression 281
   17.1.1 Contrast Coding for ANOVA with Two Groups 281
   17.1.2 Contrast Coding for One-factor ANOVA with Three Groups 282
   17.1.3 Orthogonal Contrasts 284
17.2 Two-Factor ANOVA via Multiple Regression 286
17.3 Summary 293
17.4 Study Questions 293

Chapter 18

ANOVA WITH RANDOM FACTORS 295

18.1 ANOVA with One Random Factor 295
   18.1.1 Random Effects 295
   18.1.2 Assumptions of the Random-factor ANOVA 296
   18.1.3 Expected Mean Square in the Random-factor ANOVA 296
   18.1.4 The Primary Question in a Random-factor ANOVA 297
18.2 Two-factor Mixed-Effects ANOVA Model 299
   18.2.1 The Concept of a Mixed-effects Model 299
   18.2.2 Assumptions of the Two-factor Mixed ANOVA Model 300
   18.2.3 Expected Mean Square in the Two-factor Mixed ANOVA 301
   18.2.4 Effect Size of Mean Differences among Levels of the Fixed Factor 304
   18.2.5 Generalizations with the Two-factor Mixed ANOVA 305
18.3 Summary 306
18.4 Study Questions 307

Chapter 19

REPEATED-MEASURES ANOVA 309

19.1 A Simple Repeated-Measures ANOVA 309
PART IV MULTIVARIATE DATA ANALYSIS 329

Chapter 20

LOGISTIC REGRESSION 331

20.1 The Concept of Logistic Regression 331
  20.1.1 Probability, Odds, and Odds Ratio 331
  20.1.2 The Logistic Model 333
  20.1.3 Logit Form of the Logistic Regression Model 334
  20.1.4 Interpretation of the Regression Coefficients 334

20.2 Tests and Interpretations of Logistic Regression Results 336
  20.2.1 Goodness-of-fit Tests 336
  20.2.2 Hosmer-Lemeshow Goodness-of-fit Test 337
  20.2.3 Test for Significance of Predictor Variables 338
  20.2.4 Effect Size Information with Logistic Regression 339
  20.2.5 Classification Table 341

20.3 Coding Categorical Predictors 342

20.4 Using SPSS for Binary Logistic Regression 343

20.5 Comparison of Full and Restricted Models 347

20.6 Selection of Predictors in Logistic Regression 348

20.7 Assumptions in Logistic Regression 349

20.8 Summary 349

20.9 Study Questions 351

Chapter 21

MULTIVARIATE ANALYSIS OF VARIANCE 353

21.1 The Concept of MANOVA 353

21.2 MANOVA versus Separate ANOVAs 354

21.3 When to Use Separate ANOVAs? 354

21.4 When to Use MANOVA? 355

21.5 Assumptions in MANOVA 355

21.6 MANOVA with Discriminant Analysis 356

21.7 MANOVA with Planned Comparisons 361

21.8 Sample Size in MANOVA 366
Chapter 22

EXPLORATORY FACTOR ANALYSIS 369

22.1 Correlated Variables and Underlying Factors 369
22.2 Basic Concepts in Exploratory Factor Analysis 370
22.3 Communalities and Eigenvalues 372
22.4 The Principle Factor Method of Extracting Factors 373
22.5 Rotation of Factors 374
22.6 Determining the Number of Factors 376
   22.6.1 “Eigenvalues of one or higher” Criterion 376
   22.6.2 Scree Test 377
   22.6.3 Parallel Analysis 378
22.7 Using SPSS for Exploratory Factor Analysis 379
22.8 Summary 383
22.9 Study Questions 384

Chapter 23

CONFIRMATORY FACTOR ANALYSIS 387

23.1 Differences between EFA and CFA Models 387
23.2 Basic Steps for CFA 389
   23.2.1 Specification of the CFA Model 389
   23.2.2 Evaluation of the CFA Model Adequacy 390
23.3 Summary 397
23.4 Study Questions 398

Chapter 24

ELEMENTS OF STRUCTURAL EQUATION MODELING 401

24.1 Path Analysis 401
   24.1.1 Path Coefficients 402
   24.1.2 Exogenous and Endogenous Variables 403
   24.1.3 Assumptions 404
   24.1.4 Decomposition of Correlation Coefficients 404
   24.1.5 Testing the Causal Model for Data Fit 406
      24.1.5.1 Just-identified models 406
      24.1.5.2 Overidentified models 407
24.2 Elements of Structural Equation Modeling 412
   24.2.1 Upgrading Models for Path Analysis to Typical SEM Models 412
   24.2.2 Comparing Groups on Latent Variables (Constructs) 413
      24.2.2.1 SEM versus MANOVA 413
      24.2.2.2 Factorial invariance across groups 414
This is where quantitative research comes in. Quantitative research is the process of collecting numerical data through standardized techniques, then applying statistical methods to derive insights from it. When is quantitative research useful? The goal of quantitative research methods is to collect numerical data from a group of people, then generalize those results to a larger group of people to explain a phenomenon. An example would be, how well do New Delhi’s government schools ensure that students complete their education? Prepare the research questions that need to be answered to address the research problem. For example, what percentage of students drop out of government schools in New Delhi? Quantitative Research in Education. Three Volume Set. Edited by: Stephen Gorard - Durham University, UK. Series: Fundamentals of Applied Research. Other Titles in: Education | Educational Research Methods | Research Methods & Evaluation (General). October 2008 | 1 208 pages | SAGE Publications Ltd. Download flyer. Randomized Experiments in Educational Policy Research: A critical examination of the reasons the educational evaluation community has offered for not doing them. T. Cook. Mixed Methods Research: A research paradigm whose time has come. R. Johnson and A. Onwuegbuzie. Difficulties Experienced by Education and Sociology Students in Quantitative Methods Courses. M. Murtonen and E. Lehtinen.
